

- Preparation and editing normative acts for the Ministry of Transport, Construction and Tourism and the Ministry of Labour;
- Drafting and editing product specifications for sound absorbing, sound and vibration proofing materials;
- Drawing up technical approvals and certificates of sound absorbing, sound and vibration proofing materials;
- Organizations of two international conferences in the field;
- Publication of ten specialized works in the field of acoustics and vibrations.

#### BOARD COMMITTEE

President	Prof. Dr. M. Sc eng Dr.h.c. Polidor Bratu, member of Science Academy in Romania
Prime-Vicepresident:	Prof. Dr. M. Sc eng. Nicolae Enescu
Vicepresidents:	Prof. Dr. mat. Mihai Toader Prof. Dr. fiz. Ioan Magheți Prof. Dr. M. Sc eng. Valentin Ceaușu
General Secretary:	Dr. M. Sc eng. Mariana Stan
Treasurer:	Ec. Gabriela Vulpe

**SOCIETATEA ROMÂNĂ DE  
ACUSTICĂ**

**ROMANIAN SOCIETY OF  
ACOUSTICS**

**FOUNDED in 1994**

The Romanian Society of Acoustics – SRA has been set up on **February 7, 1994** as a result of the freely expressed will of its founders including the “Polytechnica” University of Bucharest, the Romanian Academy of Sciences, the Military Technical Academy, the “Carol Davila” university of Medicine in Bucharest, as well as other higher-education and R&D institutions and its establishment was attested by a notary public on May 12, 1994.

**S.R.A. is a professional**, non-governmental, self-supporting, non-profit and non-political **association**. The S.R.A. members are physical and legal entities including:

- Researchers and members of the professoriate, graduates of higher-education institutions activating in the field of acoustics or related fields;

- Research-design institutes, independent laboratories performing measurements and controls in acoustics and vibration; manufacturing businesses/suppliers of sound absorbing, noise and vibration proofing materials and systems.

The **aim** of the S.R.A. is **to spur interest** in the field of acoustics and **to develop** basic and applied **research** in the field and related disciplines through focusing the efforts of the scientists and facilitation of the exchange of technical and scientific information in the country and abroad.

The Romanian Society of Acoustics **supports** businesses, other private ventures or state-budgeted institutions through contract-based scientific research works, expression of expert opinion or consultancy, surveys, quantitative/qualitative analyses, drafting standards and rules, training courses, etc.

**S.R.A. is engaged** in laboratory **research development**, training and development courses in acoustics, vibration and machinery dynamics, physics of buildings, **spurs** scientific research in higher-education institutions and encourages participation of students thereto.

The Romanian Society of Acoustics:

- **Organises** conferences, symposia, debates on the European Directives, normative acts and technical specifications in the field;
- **Promotes** new efficient technical solutions, noise and vibration damping materials and technologies for buildings, installations and industrial equipment;
- **Evaluates** to the benefit of the manufactures or suppliers of sound absorbing, sound and vibration proofing materials and systems, the opportunities and long-term advantages of using such materials and systems, taking into account the life cycle of the solution selected and protection level obtained.

**S.R.A. edits** and publishes the specialized journal **Romanian Journal of Acoustics and Vibrations**, with presentation in English, including the basic and applied scientific contributions in the field and the achievements and performances of the specialized companies.

S.R.A. has become a full member of the **EUROPEAN ACOUSTICS ASSOCIATIONS (EAA)** whose headquarters are in Spain in Barcelona.

Through its members S.R.A. strives for making itself known, for creating a efficient and reliable image in the scientific, technical, academic and business environment.

The achievements of S.R.A. can be briefly presented as follows:

- Training of specialists in the control, assessment and measurement of the noise level at the interior and exterior of buildings;
- Training of specialists in the vibration insulation and damping in buildings, machinery and tram runway;
